## EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Kathryn E. Noll on May 27, 2010.

IN THE CLAIMS:

Claim 1. A method of predicting bone or articular disease in a subject, the method comprising the steps of:

determining one or more micro-structural parameters, one or more macroanatomical parameters, and one or more biomechanical parameters of a at least a portion of a bone joint in said subject, wherein determining includes using a computer to extract trabecular micro-structure from an electronic image data of at least a portion of said bone said-subject;

determining electronically from the electronic image data a cortical bone thickness of the bone; and

combining at least said determined cortical bone thickness with the one or more micro-structural parameters into an index and comparing said index to a reference database to predict the risk of bone or articular disease, the said parameters including a micro-structural parameter, a macro-anatomical parameter, and a biomechanical parameter.

Claim 8. The method of claim 7 1, wherein the image comprises a calibration phantom further comprising determining one or more biomechanical parameters of at least a portion of said bone:

Page 3

Application/Control Number: 10/753,976

Art Unit: 3737

wherein the step of combining further includes combining said one or more biomechanical parameters with said determined cortical bone thickness and said one or more micro-structural parameters into said index.

Claim 9 The method of claim 1, wherein said micro-structural parameters are selected from the group consisting of: stainless steel equivalent thickness wherein the stainless steel equivalent thickness is determined as the average gray value of the region of interest expressed as thickness of stainless steel with equivalent intensity; trabecular contrast wherein the trabecular contrast is determined as one of the trabecular equivalent thickness and marrow equivalent thickness: fractal dimension: Fourier spectral analysis wherein the Fourier spectral analysis is determined as one of a mean transform coefficient absolute value and a mean spatial first moment; predominant orientation of spatial energy spectrum; at least one of trabecular area and total area; trabecular perimeter; trabecular distance transform; marrow distance transform; trabecular distance transform regional maxima values; marrow distance transform regional maxima values; star volume; trabecular bone pattern factor; connected skeleton count or trees (T); node count (N); segment count (S); node-to-node segment count (NN); node-to-free-end segment count (NF); node-to-node segment length (NNL) node-to-free-end segment length (NFL); free-end-to-free-end segment length (N'F'L); node-to-node total struts length (NN.TSL); free-end-to-free-ends total struts length (FF.TSL); total struts length (TSL); FF.TSL/TSL; NN.TSL/TSL; loop count (Lo); loop area; mean distance transform values for each connected skeleton: mean distance transform values for each segment (Tb.Th); mean distance transform values for each node-to-node segment (Tb.Th.NN); mean distance transform values for each node-to-free-end segment (Tb.Th.NF); orientation of each segment; angle of each segment; angle between segments; length-thickness ratios (NNL/Tb.Th.NN) and (NFL/Tb.Th.NF); and interconnectivity index (ICI) ICI=(N\*NN)/(T\*(NF+1)).

Claims 20 and 21 are cancelled.

Application/Control Number: 10/753,976

Art Unit: 3737

The following is an examiner's statement of reasons for allowance:

The prior art of record does not teach or suggest a method of predicting bone or articular disease in a subject, the method comprising the steps of: determining one or more micro-structural parameters of at least a portion of a bone in said subject, wherein determining includes using a computer to extract trabecular micro-structure from electronic image data of at least a portion of said bone; determining electronically from the electronic image data a cortical bone thickness of the bone; and combining at least said determined cortical bone thickness with the one or more micro-structural parameters into an index and comparing said index to a reference database to predict the risk of bone or articular disease as now claimed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to JOHN F. RAMIREZ whose telephone number is (571)272-8685. The examiner can normally be reached on (Mon-Fri) 7:00 - 3:30 p.m.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Brian L. Casler can be reached on (571) 272-4956. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
